A
What PRISM does at each scan
Surveillance MRI and its masks (this and earlier scans)
Measurements volumes, shape, intensity and change
Image pathway ridge model, no dates
Clinical record age, sex, IDH, MGMT
Treatment timeline surgery, radiotherapy, chemotherapy dates
Timeline pathway ridge model on treatment position
Combined score shown beside both
Confidence
Conformal set (80%) one outcome or both
Pathway agreement same side of median?
Reliability card how many tested scans like this one
Structured evidence record every value with its source
Local language model writes the report (offline, one GPU)
Deterministic checker numbers, flags and wording vs record
Report to the clinician figure, scores, confidence and what was not used
Where a cohort records no treatment dates, the timeline is reduced and the image pathway runs on its own.
B
How it was evaluated
MU-Glioma-Post (development) 146 scans in the intended use 5 × 5 patient-grouped cross-validation
Fit once on MU, lock the models and write the plan
LUMIERE (locked) 178 scans, no treatment dates
UCSF-ALPTDG (locked) 69 second scans
Reports 406 records from all three cohorts, frozen checker
