A
What PRISM does at each scan
Surveillance MRI and its masks (this and earlier scans)
Measurements volumes, shape, intensity and change
Image pathway ridge model, no dates
Confidence
Conformal set (80%) one outcome or both
Structured evidence record every value with its source
Clinical record age, sex, IDH, MGMT
Combined score: one model on both inputs
Pathway agreement same side of median?
Timeline pathway ridge model on treatment position
Reliability card how many tested scans like this one
Treatment timeline surgery, radiotherapy, chemotherapy dates
Local language model writes the report (offline, one GPU)
Where a cohort lacks treatment dates, the timeline is reduced; the image pathway needs no dates at all.
Report to the clinician figure, scores, confidence and what was not used
Deterministic checker numbers, flags and wording vs record
B
How it was evaluated
MU-Glioma-Post (development) 5 × 5 patient-grouped CV, 146 intended-use scans; locked on all 181 grade 4 scans
Fit once on MU, lock the models and write the plan
LUMIERE (locked) 178 scans, no treatment dates
UCSF-ALPTDG (locked) 69 second scans
Reports checked 406 records: 114 MU, 162 LUMIERE, 130 UCSF second scans
