A What PRISM reports at each scan

Inputs

previous scan

current scan

T1-contrast MRI with tumour masks

Treatment timeline

age sex IDH MGMT

Clinical record

Evidence

PRISM

splits the score into its evidence

Scores

Image pathway

0.64

tumour volumes and change

Combined score

0.33

both kinds of input

Timeline pathway

0.21

timeline and clinical record

example values (Figure 5)

Confidence

Conformal set

both outcomes

80% set: one outcome or both

Pathway agreement

disagree

image and timeline on opposite sides of the cohort median

Reliability card

few cases

measured in this phase of care and enhancement state

Report

Per-scan record

every value with its source

Local language model

writes the text; sees no images, does no arithmetic

Check

every number matched against the record

Report

B How it was evaluated

MU-Glioma-Post

public development cohort
5 × 5 patient-grouped CV
146 intended-use scans

Models locked

fitted on 181 grade 4 scans
transfer rules fixed
before external scoring

LUMIERE

178 scans
no treatment dates

UCSF-ALPTDG

69 second scans scored
130 reported

Reports checked

406 in total
114 MU, 162 LUMIERE,
130 UCSF
