A
What PRISM does at each scan
Confidence
Surveillance MRI
+ masks, earlier scans
Measurements
volume, shape, change
Image pathway
ridge model, no dates
Conformal set (80%)
one outcome or both
Evidence record
every value
with its source
Clinical record
age, sex, IDH, MGMT
Combined score
one model, both inputs
Pathway agreement
same side of median?
Treatment timeline
dates of each therapy
Timeline pathway
ridge, position in care
Reliability card
tested scans like this
Language model
local; writes the report
Where a cohort lacks treatment dates, the timeline is reduced; the image pathway needs no dates at all.
Report to the clinician
figure, scores, confidence
and what was not used
Checker
numbers, flags, wording
B
How it was evaluated
MU-Glioma-Post (development)
5 × 5 patient-grouped CV,
146 intended-use scans;
locked on all 181 grade 4 scans
Fit once on MU
lock the models
and write the plan
LUMIERE (locked)
178 scans,
no treatment dates
UCSF-ALPTDG (locked)
69 second scans
(detection)
Reports checked
406 reports:
114 MU, 162 LUMIERE,
130 UCSF second scans
